PROFESSIONAL SUMMARY

I am passionate about designing reliable cloud infrastructure, automating deployment processes, managing scalable applications and leveraging data analytics and machine learning to solve real-world problems.

TECHNICAL SKILLS

Cloud Infrastructure: AWS (EC2, VPC, S3, RDS, CloudWatch, IAM) | Microsoft Azure (RG, Azure SQL Database, VM, Load Balancer, Virtual Network) | Linux (Ubuntu)

DevOps & Deployment: Docker | Docker Compose | MiniKube | GitHub Action | CI/CD | Bash Scripting | Application Deployment

Data Science & Analytics: NumPy | Pandas | Matplotlib | Seaborn | Scikit-learn | Data Cleaning | Data Wrangling | Exploratory Data Analytics | Data Modeling | Data Visualization | Microsoft Excel | Power BI

PROJECTS

Optimizing Food Supply Chain using IoT and Machine Learning – Capstone Project (Rome Business School) / February, 2026

- Collaborate with teams to design an IoT-enabled logistics system for real-time monitoring and food storage within Lagos supply chains
- Model Evaluation and Forecasting: develop machine learning models for demand forecasting and route optimization using models such as RF, GB, XGBoost and evaluation metrics (MAE, MAPE, R^2)
- Access the system's performance based on key metrics such as spoilage rate, delivery time, and cost efficiency
- Evaluate stakeholder readiness, scalability, and policy implications of implementing IoT-ML systems

Cloud/DevOps Engineer Trainee – Capstone Project / July, 2026 – October, 2026

- Collaborated with cross-functional teams to design and implement a secure AzureDrop web application for storing and sharing files

- Run the application on Azure virtual machines, with the public and private parts separated
- Store uploaded files in Azure Blob Storage and application data in Azure Database for PostgreSQL
- Package the application with Docker and put NGINX in front of it with HTTPS
- Automate deployment with GitHub Actions and provide a health check
- Test the live application and record the result

https://azuredrop-team.southafricanorth.cloudapp.azure.com/login

Node.Js & Docker Deployment – Practice

- Build and deploy a Node.Js application using
- Push the application to a new GitHub repository with app.js, Dockerfile, package.json files to run and containerize the application
- Connect to Linux server and clone GitHub repository, verify that the Node.Js application files are available on Linux server
- Build a docker image using my Docker Hub username
- Push the docker image to Docker Hub repository, verify that the image is available on Docker Hub
- Pull the image from Docker Hub, run a container using the image pulled from Docker Hub

EDUCATION

- **Rome Business School in Collaboration with Valencian International University, Spain**

  Master in Data Science Management (MSc.) / October, 2026

- **University of Ibadan, Ibadan**

  Bachelor of Science (B.Sc.) Statistics / February, 2017

CERTIFICATIONS & PROFESSIONAL DEVELOPMENT

- Cloud Computing (TechCrush) / Completed October, 2026
- Google Data Analytics – Foundation (Coursera) / 2024
- Data Analysis with R Programming (Coursera) / 2024
